PDF DOCUMENTATION

First Prompt:
Create a one-page HTML and CSS website for a personal portfolio. Include a navigation bar at the top, and the following sections: a Home/Hero section with my name and a welcoming headline, an About Me section with a short biography placeholder, a Skills section displayed as a grid, a Projects section with three placeholder cards, and a Contact section with a simple form. Use a clean, modern design with a dark mode aesthetic featuring deep charcoal backgrounds and vibrant neon blue accents. Keep all the CSS and HTML in a single file for easy testing.

Second Prompt: Refinements
Modify the previous code to make the navigation bar sticky at the top of the page so it stays visible when scrolling. Add smooth scrolling behavior to the page so that clicking the navigation links smoothly glides down to the corresponding sections.

Last Prompt: Finale
Improve the visual design by adding a subtle "hover" effect to the project cards and the submit button in the contact form, making them scale up slightly when the mouse hovers over them. Ensure the entire layout is mobile-responsive so that the skills grid and project cards stack vertically on smaller screens.

ABOUT ME

Crafting digital solutions with purpose

Hi, I'm **Your Name** — a passionate developer and designer based in **Your City**. I specialize in building clean, performant web applications that balance beautiful aesthetics with rock-solid functionality.

With a background in both **frontend engineering** and **UX design**, I enjoy taking products from concept to completion. When I'm not coding, you'll find me exploring new tech, contributing to open source, or enjoying a good espresso.

ABOUT ME

Reaching for the skies — and beyond

Hi, I'm **Avijun E. Pajarito** — a 3rd year Aerospace Engineering student based in **Davao City, Catalunan Pequeno**. I have a deep love for cars and an even deeper fascination with the vast expanse of space.

Outside of engineering, I express myself through **beatboxing**, unwind in the kitchen through **cooking**, and stay grounded with **driving**. I believe that great engineers are great problem-solvers first — and that curiosity about the world fuels everything.

Reflection:

- What worked well?
  The actual website was really well made. It feels like a professional made it. I'm definitely using replit to make games
- What needed manual fixing?
  My name, My contact number, about me, and etc. Since I know coding I had to change the code in the Project.html I probably code have prompt it, but I rather save it for another project in mind.
- What did you learn about prompting?
  Well I used AI to give me a good prompt to begin the website, I then prompt my own refinements.
