AI Tool Prompt Engineering Report

Name of AI-Tool: https://app.leonardo.ai/

Purpose is to create an image using a prompt

I would like to see an AI image my self

My Initial Prompt: “Create an image of a Black haired samurai guy that has his sword sheathed ready to strike at any time. Make the background in the woods with ninja's that are about to attack.”

Output: The sword is definitely not sheathed and the arms of the guy holding the sword looks bad but other than that it followed what I said.

Using Gemini (Pro Version)

What I prompted: “Give me a prompt for leonardo.ai to give me an image of a samurai guy that has his sword sheathed but is ready to attack to make it look edgy. And the background is in the forest with ninja's that are color black that is ready to attack him”

Improved prompt by Gemini: (Already seems better than mind)
A highly detailed cinematic shot of an edgy, battle-hardened samurai in a dark, misty forest at night. He is in a low, dynamic stance, his hand gripping the hilt of his sheathed katana, fully prepared to draw and strike in a split second. He wears worn, dark, intricate samurai armor with a tattered face mask. In the background, shrouded in the dense fog and shadowed branches, are multiple black-clad ninjas, their silhouettes blending into the darkness, holding kunai and poised to attack. High contrast, moody moonlight piercing through the trees, volumetric fog, 8k resolution, photorealistic, sharp focus, epic dark fantasy concept art.

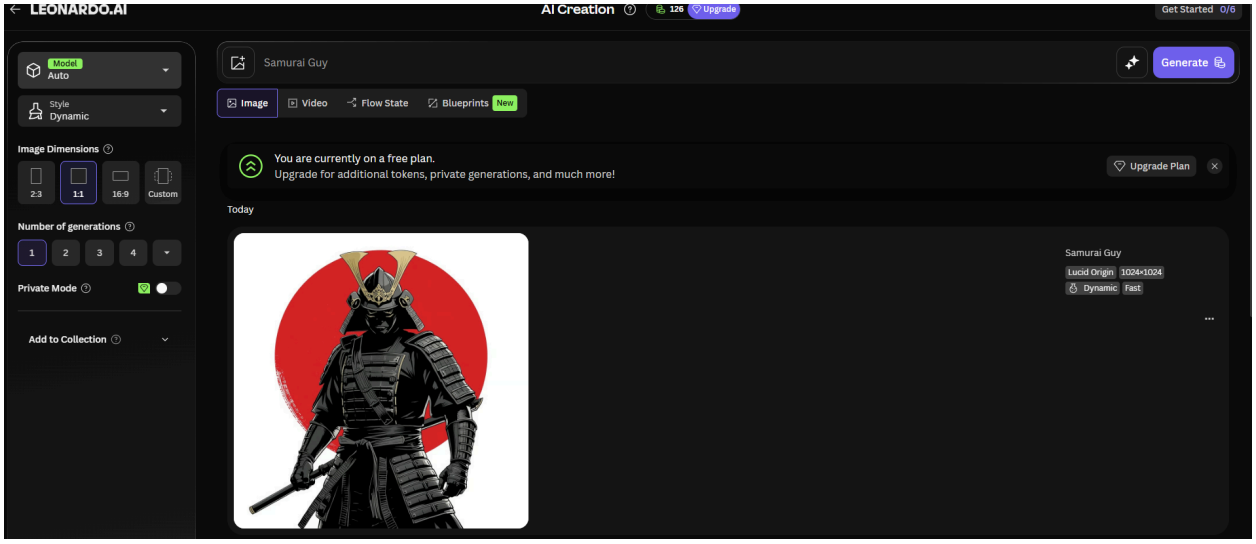
New Output using the Gemini Prompt:

Reflection and Comparison:
My Prompt is definitely newbie level the fact that the sword is not sheathed at all makes me believe that it was my unclear prompt that did that, compared that to Gemini's insane prompt (realized my prompt was terrible when I saw it's prompt) it actually made it better, realistic, have clear shadows and lighting, and more importantly the sword is sheathed and is actually ready to attack.

Compared to Gemini's prompt, my prompt looks like an actual AI slop. The arm looks so bad, the ninja's seem to be on the samurai's side and the worst one of all if I haven't mentioned it is the sword isn't sheathed.

While Gemini's prompt (is actually crazy) made the image look realistic, dark fantasy (what I expected for my prompt *sigh*), had the sword sheathed, made the look the ninja's an enemy of the samurai guy since they are hiding, the shadow and lighting made it better it looks intense.

AI has grown since the last few years. I did not expect to use AI like this.

Appendices:


Testing of leonardo AI prompt is just "Samurai Guy"
